

MCG EXPO

5 medical college students came to our school to share some insight on diabetes, with the differences of diabetes, how living with diabetes works, and the improvement in technology for diabetes

THINGS WE LEARNED

What is diabetes?

Well first we need to discuss what it is. Diabetes is a disease that you can be born or get that affects the insulin either make too much or not enough

The difference in type 1 and 2 diabetes

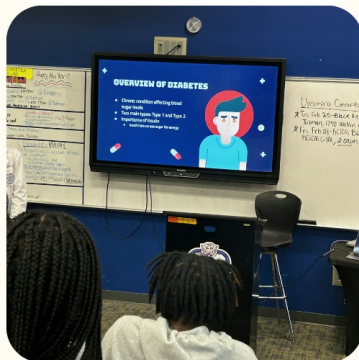

Now most people may not know the differences between the diabetes but type 1 your body doesn't make enough insulin and its something you're born with, Meanwhile type 2 your body is resistant to insulin and very temperamental with sugar levels. This one is attained

How living with diabetes works

People that have diabetes still live able lives, but just have some different habits they must do, compared to someone else. These include checking blood sugar levels, watching intake, and take medicine

The improvement in technology for diabetes

Comparing technology of now and the past for diabetes is an amazement. With in the past there were many steps in just checking blood sugar levels, now its one prick and you can get it instantly!
